

A detailed 3D illustration of a blood vessel. The vessel walls are shown in a deep red, textured appearance. Inside the vessel, numerous red blood cells (erythrocytes) are depicted as biconcave discs, some in sharp focus and others blurred in the background. Several white blood cells (leukocytes) are also visible, characterized by their larger size and prominent, multi-lobed nuclei. The overall scene is illuminated with a warm, reddish glow, creating a sense of depth and movement within the circulatory system.

6° caso clinico

«Ci vuole calma e sangue freddo»
